

BUILD A LIGHTHOUSE

Create your own working model lighthouse!

The aim of this course is to create a working battery powered lighthouse model.

During the project you will complete the following outcomes:

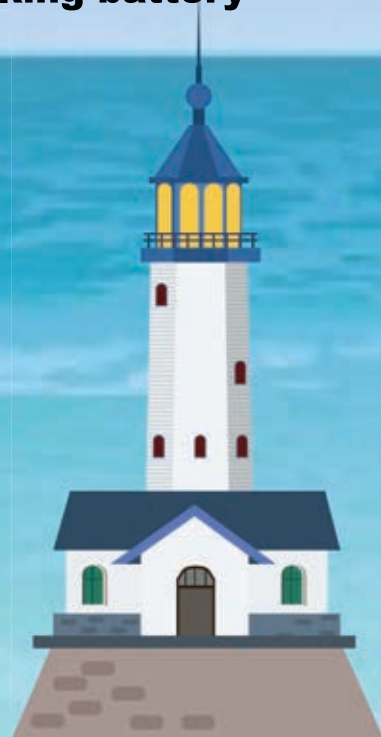

Create a basic switched electrical light circuit.

Create a model lighthouse using basic modelling skills.

Build a Switch system and add it to your model.

Decorate your final design.

Document the process with a minimum of 4 images.

This project will help you create a fantastic lighthouse model of your own. It can be based on a real working lighthouse from your favourite coastal area, or simply from your own imagination. Bring it to life by adding a basic lighting system and decorate it to finish the effect!

To participate in this project you must be aged 19 or over and live in the Rotherham Area.
